DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: Group A, Figs. 9-11;

Group B, Figs. 12 and 13;

Group C, Figs. 14-16 .

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 3727

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Gordon Gray on 9/24/05 a provisional election was made without traverse to prosecute the invention of Group B, claims 10-13 and 20. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-9, 14-19, and 21 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3727

Claims 10-13 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Florian (US 3,989,158). Regarding claims 10-13 and 20, see Figs. 3 and 6 where the claimed structure is shown. The barrier 10 wedges at 33 and the apertures are 13.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-13 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang (US 6,378,325) in view of Florian (US 3,989,158). Regarding claims 10-13 and 20, Yang does not teach the upwardly angled extension of the barrier. Florian as seen in Fig. 6 teaches the upwardly angled extension at 32 for wedging with the outer container. It would have been obvious to make the barrier of Yang conform the shape of the outer container as taught by Florian to make insure that the extension remains properly seated in the outer container and is not accidentally displaced by the contents on top of the barrier.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gamwell (US 5,271,508) is cited for teaching that the barrier is shaped to match that of the outer container.
